

CROWDCONTROL™

STREAMLINE VULNERABILITY MANAGEMENT

EASILY INTEGRATE WITH YOUR APPSEC PROGRAM...NO CHANGES REQUIRED

Bugcrowd's market leading bug bounty platform, Crowdcontrol™, enables organizations to seamlessly integrate vulnerabilities found on their Bugcrowd managed program directly into the software development lifecycle (SDLC) with our enterprise integration suite: API, JIRA, Slack, Qualys, and embedded forms.

POWERFUL AND INTUITIVE INTEGRATIONS

Meet the needs of your current application security assessment process with the simplicity of Crowdcontrol's enterprise-ready integrations.

Integrate bounty report data into your existing SDLC using our powerful API.

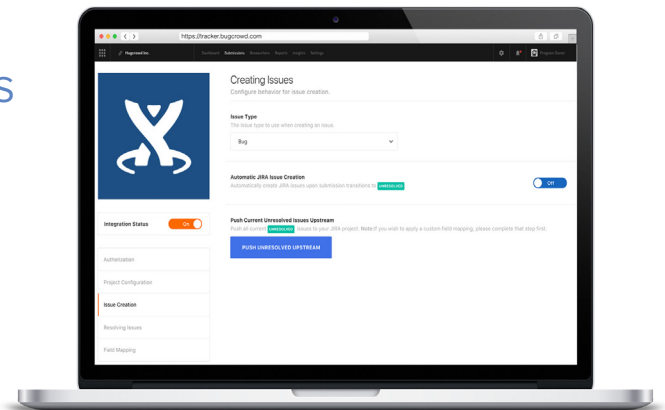

Streamline communication between teams to fix bugs faster with a bi-directional JIRA integration.

Receive notifications immediately to quickly identify critical issues or any actionable items that need attention.

Share data across platforms, centralizing your vulnerability information.

*"As security becomes central to software development, pairing JIRA with the insights gained from your Bugcrowd managed bug bounty program allows for **unprecedented visibility and control of the development process, enabling faster, high-quality product releases in one integrated platform.**"*

- Dan Grzelak, Head of Security, Atlassian

FLEXIBILITY & EASE MANAGING EXTERNAL SUBMISSIONS

Capture vulnerabilities from outside researchers with ease via an embedded submission form, for secure validation and flexibility.
